

Test Tables:

Test id	Test description/justification – what is the test for and why this particular test.	Actual data for this test	Expected output	Actual desk check result	Desk check outcome
1	Test Invalid Upper Boundary Currency - This checks that the system rejects invalid currencies	Input: 6 (Invalid), then 3	Error message for 6,	Error message for 6, Euro	PASS
2	Check Valid Euro Input Amount - Test to ensure Euro accepts valid inputs and returns the correct coin	Input: 60 (Euro)	3 x 20 cent coins	3 x 20 cent coins	PASS
3	Test Invalid Amount for Multiples of 10 (Euro) - Euro should accept any input, but ensure the system	Input: 55 (Euro)	2 x 20 cent, 1 x 10 cent, 1	Correct breakdown displayed.	PASS
4	Test AU\$ with High Value Multiple of 5 - Test large, valid	Input: 90 (AU\$)	Accept the	Input accepted.	PASS
5	Test Lower Edge Case for AU\$ - Ensure the system rejects amounts not multiple of five near lower	Input: 6 (Invalid AU\$),	Error message for 6,	Error message displayed, 10	PASS
6	Test Invalid Upper Boundary for Input Amount - Ensure that inputs larger than 100 are rejected for all	Input: 105 (Invalid),	Error message for 105,	Error message displayed,	PASS
7	Test Negative Amount for Euro - Check how the system handles negative amounts for Euro.	Input: -20 (Invalid)	Error message displayed	Error message displayed, no	PASS
8	Check Correct Coin Breakdown for Smallest Value (US\$) - Test if the smallest valid US\$ value (1)	Input: 1 (US\$)	1 cent coin	1 cent coin displayed.	PASS
9	Test AU\$ Maximum Allowed Value - Validate if the system accepts the maximum valid value	Input: 95 (AU\$)	Accept the amount.	Amount accepted without	PASS
10	Test Upper Invalid Boundary for Amount (Euro) - Ensure the system rejects values greater than 100 for	Input: 110 (Invalid), then 60	Error message for 110,	Error message displayed, 60	PASS
11	Check Proper Handling of Consecutive Invalid Inputs (Amount) - Ensure multiple invalid inputs are rejected without breaking	Input: -5 (Invalid), 105 (Invalid),	Error messages for -5 and 105,	Error messages displayed, 50 accepted.	PASS

12	Test Exact Coin Combination for US\$ Amount - Test a specific US\$ value that requires all coin types to validate calculation accuracy.	Input: 41 (US\$)	1 x 25 cent, 1 x 10 cent, 1 x 5 cent,	Correct breakdown displayed.	PASS
13	Check Lower Edge Case Currency (Euro) - Ensure the system accepts the lowest valid currency selection for Euro.	Input: 1 (Euro)	Accept the input and display the	1 x 1 cent coin displayed.	PASS
14	AUS\$ Input with Invalid Upper Boundary Multiple - Test the system's handling of a near-upper	Input: 94 (Invalid), then 90	Error message for 94,	Error message displayed, 90	PASS
15	Test Lower Boundary for US\$ - Ensure the system accepts the minimum valid US\$ amount and	Input: 1 (US\$)	1 cent coin	Correct breakdown displayed.	PASS
